

Reeti C++ API

You can now develop easily your customs applications for the Reeti using our C++ API. This API allows you to develop applications without using any ROS or URBI functions.

How to use the API

In order to use the API you need to include it in your project. Modify your *CMakeLists.txt* and add the following lines:

```
find_package(Reeti)
include_directories(${Reeti_INCLUDE_DIRS})
target_link_libraries(your_target ${Reeti_LIBRARIES})
```

More information

You can find a complete documentation of the C++ API here [C++ API Description](#) or here [API doxygen documentation](#)

You can find some samples here : [C++ API samples](#)
