

INSERM - SWOOZ

Project website : <http://swooz.free.fr/>

Guillaume Gibert is in charge of the Super Wizard of Oz (SWoOz) ANR project. In the frame of this project, we developed an integrated hardware/software platform that enables a person to live in a humanoid robot thanks to a strong teleoperation/teleperception link. The human's movements are transferred in real-time to the robot which mimics the human's behaviors. The human teleoperator senses the scene as if he /she was in the robot's place. This platform is used to investigate human-robot interactions and to train cognitive models to create socially-autonomous robots.
