

Reeti Urbi API

Reeti core is based on Urbi.

Reeti is delivered with some [embedded modules](#).

Your own programs can interface with Reeti using these functions and data in different ways :

- develop your own new [C++ Urbi modules](#).
- develop some [Urbi scripts](#).
- call some Urbi scripts from standalone [C++ urbi client](#) (remote client can be run on Reeti or on another computer through ethernet connection)
- call some Urbi scripts from standalone [Java urbi client](#) (remote client can be run on Reeti or on another computer through ethernet connection)

You can refer to the [Urbi sdk](#) for complete documentation about Urbi development.

Urbi API child pages index
